THE PERFECT LANGUAGE FOR ASTRODYNAMICS

Performance

Math Syntax

Legacy Code
Support

Fortran 77!?

1970

Computing costs
are the limiting
factor

2016

Personnel costs
are the limiting
factor

Efficiency is most
important

**Cannot have
both?**

Usability should
be most
important

Performance

Math Syntax

**Legacy Code
Support**

Visualization

**Developer
Productivity**

**Native
Parallelism**

MICROBENCHMARKS

1. Calculating the Keplerian orbital elements
2. Solving Kepler's equation
3. Solving Lambert's problem
4. Calling the DOP853 Fortran 77 code

Fortran 2008, C++14, Java 8,
Matlab 2015b, Python 3.5, Julia 0.5
